GROUP 3305

89... (Amended) A method of utilizing magnetic resonance to determine the shape and position of mammal tissue, said method including the steps of:

(a) exposing an *in vivo* region of a subject to a magnetic polarizing field, the *in vivo* region including non-neural tissue and a nerve, the nerve being a member of the group consisting of peripheral nerves, cranial nerves numbers three through twelve, and autonomic nerves;

(b) exposing the *in vivo* region to an electromagnetic excitation field;

(c) [producing an output indicative of the *in vivo* region's] sensing a resonant response of the *in vivo* region to the polarizing and excitation fields and producing an output indicative of the resonant response;
